

Introduction to Shell

Lab Journal - Lab 3

Name: _____ Muhammd Idrees _____

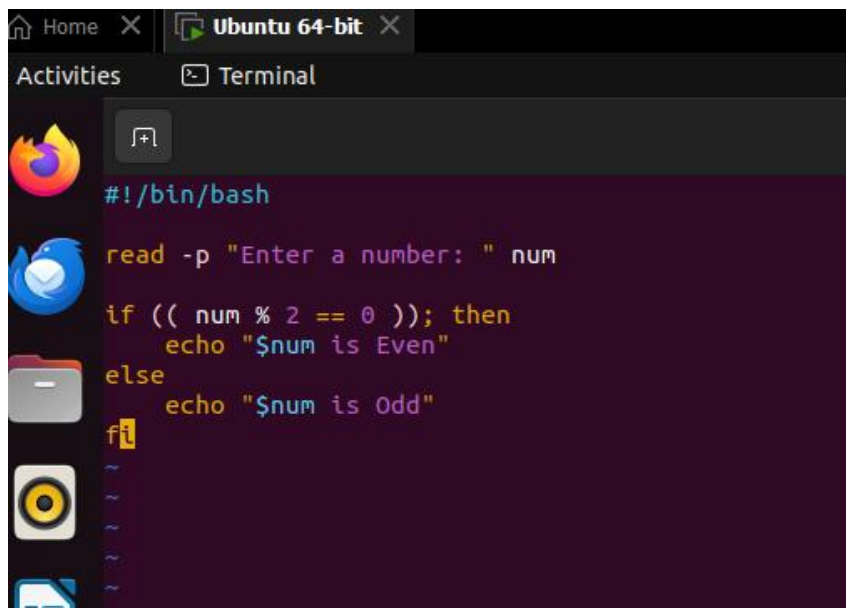

Enrollment #: _____ 01-135242-097 _____

Class: _____ BS IT - 5A _____

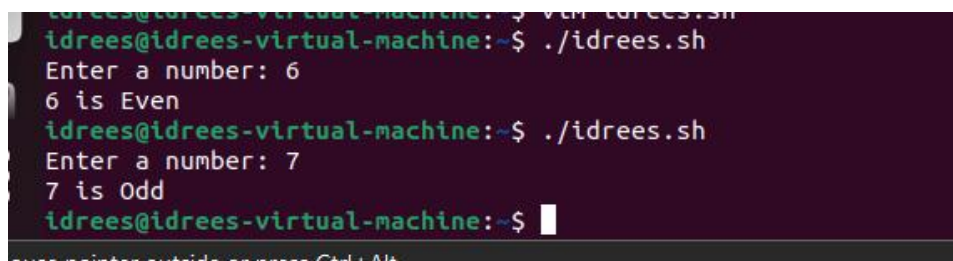

Objective

Aim: To study the various commands of BASH in LINUX.

1. Create a program of even odd and odd bash?

```
#!/bin/bash
read -p "Enter a number: " num
if (( num % 2 == 0 )); then
    echo "$num is Even"
else
    echo "$num is Odd"
fi
```

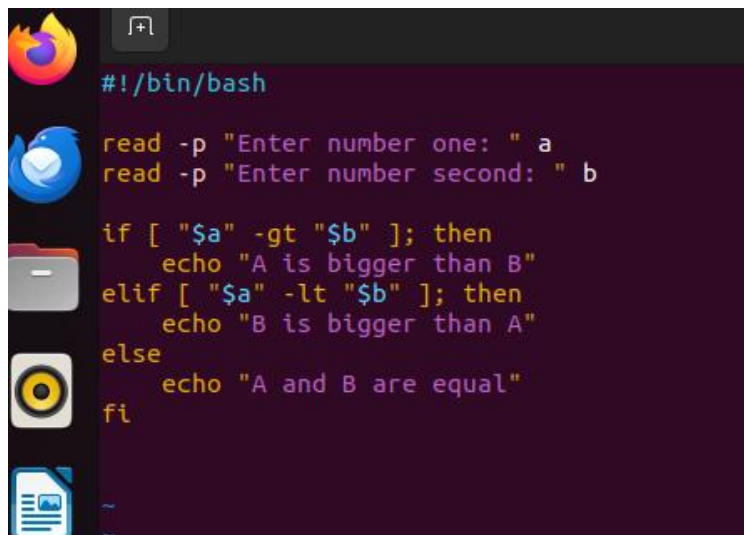

```
idrees@idrees-virtual-machine:~$ ./idrees.sh
Enter a number: 6
6 is Even
idrees@idrees-virtual-machine:~$ ./idrees.sh
Enter a number: 7
7 is Odd
idrees@idrees-virtual-machine:~$
```

2. Pass an argument and execute the program e.g `abc.sh 123,456,786`

```
idrees@idrees-virtual-machine:~$ vim idrees.sh
idrees@idrees-virtual-machine:~$ bash idrees.sh 123,456,789
nishaat Ali
Enter number one:
3
Enter number second
4
Sum=7
123,456,789
idrees@idrees-virtual-machine:~$
```

3. Run the following operators in if else statement e.g `||` , `&&` , `gt` , `ge` e.t.c

```
#!/bin/bash
read -p "Enter number one: " a
read -p "Enter number second: " b

if [ "$a" -gt "$b" ]; then
    echo "A is bigger than B"
elif [ "$a" -lt "$b" ]; then
    echo "B is bigger than A"
else
    echo "A and B are equal"
fi
```

```
idrees@idrees-virtual-machine:~$ ./idrees.sh
Enter number one: 6
Enter number second: 7
B is bigger than A
idrees@idrees-virtual-machine:~$
```

se pointer inside or press Ctrl+G.

4. Create a simple calculator program (+,-,*,%) operation using switch statement

```
#!/bin/bash

echo "Enter first number:"
read a
echo "Enter second number:"
read b

echo "Enter operator (+ - * / %):"
read op

case $op in
+) echo "$a + $b = $((a + b))" ;;
-) echo "$a - $b = $((a - b))" ;;
\*) echo "$a * $b = $((a * b))" ;;
/) echo "$a / $b = $((a / b))" ;;
%) echo "$a % $b = $((a % b))" ;;
*) echo "Invalid operator" ;;
esac
```

```
idrees@idrees-virtual-machine:~$ ./idrees.sh
Enter first number:
5
Enter second number:
6
Enter operator (+ - * / %):
+
5 + 6 = 11
idrees@idrees-virtual-machine:~$
```

```
idrees@idrees-virtual-machine:~$ ./idrees.sh
Enter first number:
6
Enter second number:
4
Enter operator (+ - * / %):
-
6 - 4 = 2
idrees@idrees-virtual-machine:~$
```

```
idrees@idrees-virtual-machine:~$ ./idrees.sh
Enter first number:
6
Enter second number:
4
Enter operator (+ - * / %):
*
6 * 4 = 24
idrees@idrees-virtual-machine:~$
```
