Project Overview

The Faculty Induction System is a modern, role-based web platform designed to streamline the end-to-end faculty recruitment process in academic institutions. The system provides an intuitive digital interface for applicants to submit their qualifications and for administrators to evaluate, score, and manage candidate applications, all within a unified, responsive environment.

Project Purpose

This is the front-end user interface for a faculty recruitment platform. It allows applicants to submit their academic qualifications, work experience, and research publications. Admins can review applications, evaluate scores, and manage candidate status. The interface is role-based, showing different views for applicants and administrators.

Technologies Used

The system is built on a modern, industry-standard technology stack optimized for performance, scalability, and developer productivity.

Technology	Purpose	Details
React 18	UI Components	Component-based architecture for building interactive interfaces
Vite	Build Tool	Fast development server and optimized production builds
Tailwind CSS	Styling	Utility-first CSS framework for responsive, consistent design

Application Pages

The application is organized into three distinct page categories, each tailored to serve specific user roles and workflows within the recruitment process.

Public Pages

These pages are accessible without authentication and serve as the entry points into the system for all users.

Page / Module	Purpose
Login	Secure credential-based authentication for all system users with session management
Register	New applicant self-registration with guided form validation and account creation
Forgot Password	Secure password recovery via email verification and token-based reset flow

Applicant Pages

A dedicated suite of pages enabling applicants to build, manage, and track their faculty application through each stage of the recruitment process.

Page / Module	Purpose
Dashboard	Central hub displaying application status, completion progress, and important notifications
Academic Qualifications	Structured entry for degrees, institutions, graduation years, and certifications
Work Experience	Chronological record of academic and professional positions with role details
Research Publications	Repository for journal articles, conference papers, books, and citations
Score Card	Transparent view of evaluation scores and assessment criteria results
Profile Settings	Personal information management, password updates, and notification preferences

SUBMIT APPLICATION PAGE:

Score Card

Hello **Khawaja Muhammad Idrees** — review your score, then submit your **final application** from this page when ready.

Where your application is sent

When you click **Submit Final Application**, your profile (qualifications, experience, publications) and this score are recorded in the **Faculty Induction System** database and appear on the **admin panel** for the hiring committee to review. You will see your status on the [Dashboard](#) after submission (e.g. Pending, Shortlisted).

Application submitted

Your application is on file for committee review. Current status: **Pending** - Submitted 4/21/2026, 4:27:21 PM.
[Go to Dashboard](#) for updates. You do not need to submit again.

HIRING OPTIONS (FOR SCORING)

Hiring Type

Permanent Faculty ▼

Applied Position

Lecturer ▼

Admin Pages

A powerful administrative interface giving recruitment committees full control over candidate management, evaluation, and communication workflows.

Page / Module	Purpose
Admin Dashboard	Aggregated overview with application statistics, pending reviews, and activity charts
Candidates List	Searchable, filterable table of all applicants with status badges and quick actions
Candidate Details	In-depth view of a single applicant's full profile, documents, and evaluation history
Send Message	Direct communication channel for sending feedback, interview invitations, or notifications

Key Features

The Faculty Induction System is built around three foundational feature pillars that ensure security, usability, and accessibility for all stakeholders

Feature	Description
Role-Based Access	Separate, fully isolated views and capabilities for Admin and Applicant user roles. Each role sees only the data and actions relevant to their responsibilities, enforced at both the UI and route levels.
Responsive Design	Fluid, adaptive layouts built with Tailwind CSS ensure a consistent, professional experience across smartphones, tablets, laptops, and large desktop displays without any functionality loss.
Protected Routes	Private and Admin route guards prevent unauthorized access. Unauthenticated users are automatically redirected to the login page, while non-admin users cannot access administrative sections.

System Architecture

User Role Structure

The application implements a strict two-tier role system that governs all access and functionality within the platform:

APPLICANT ROLE	ADMINISTRATOR ROLE
• Submit & manage applications • Upload qualifications & documents • Track application status • View personal score card • Receive admin communications	• View all candidate applications • Evaluate & score candidates • Manage application statuses • Send targeted communications • Access analytics dashboard

Route Protection Strategy

The application employs a layered routing strategy to enforce security at the navigation level:

Public Routes

Accessible to all visitors — Login, Register, Forgot Password. No authentication required.

Private Routes

Accessible only to authenticated users. Unauthenticated requests are redirected to the Login page.

Admin Routes

A subset of private routes accessible exclusively to users with the Administrator role. Non-admin users attempting access are redirected to their applicant dashboard.
